Associated data types in GHC

Manuel Chakravarty announced the availability of indexed data types, an extension of the earlier proposal for associated data types, in GHC's development version. Detailed information on where to get the right GHC and how to use indexed types is available from the Haskell wiki.

Yhc Bytecode library 0.3

Robert Dockins announced the release of the Yhc Bytecode library, version 0.3.

Haskell Program Coverage

Andy Gill checked the latest version of HPC, with GHC support, into the head GHC branch

Haskell Mersenne Twister

Lennart Augustsson made available his Haskell implementation of the Mersenne Twister random number generator.

Library extensions

A process for submitting library extensions. The libraries hackers have developed a document describing how to best go about contributing new code to the core Haskell libraries.
