## forskning och exjobb

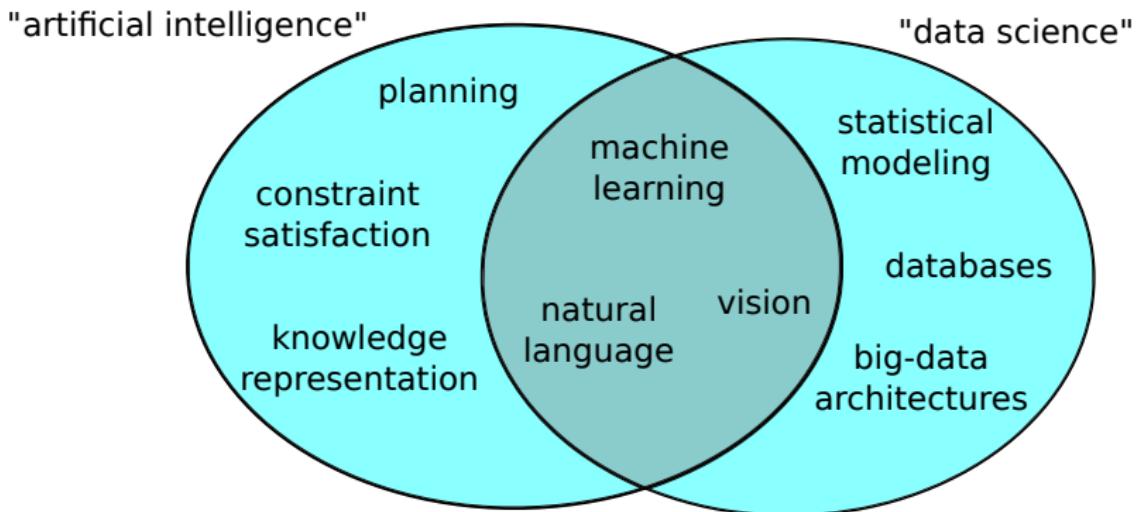

## vad är dessa buzzwords?

[källa]

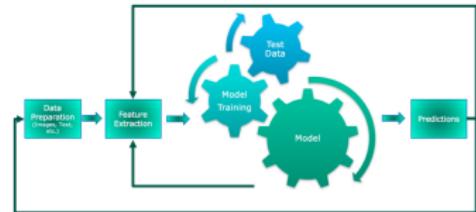

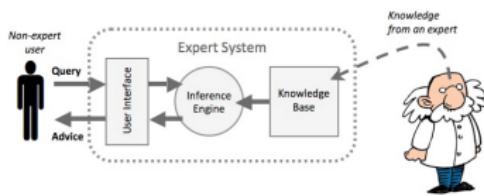

[källa]

## kunskapsdrivet eller datadrivet?

- ▶ **kunskapsdrivna system**: definiera exakt hur systemet funkar
  - ▶ **datadrivna system**: specificera en modell → “träna” modellen

[källa]

# vad är målet med AI?

- ▶ **stark AI**: simulera den kognitiva processen
- ▶ **svag AI**: lösa ett problem som “kräver intelligens”

Every aspect of learning or any other feature of intelligence can in principle be so precisely described that a machine can be made to simulate it. An attempt will be made to find how to make machines use language, form abstractions and concepts, solve kinds of problems now reserved for humans, and improve themselves. We think that a significant advance can be made in one or more of these problems if a carefully selected group of scientists work on it together for a summer.

John McCarthy,  
Dartmouth Workshop 1956

## Under the bonnet

How a self-driving car works

Signals from **GPS (global positioning system)** satellites are combined with readings from tachometers, altimeters and gyroscopes to provide more accurate positioning than is possible with GPS alone

Radar sensor

**Ultrasonic sensors** may be used to measure the position of objects very close to the vehicle, such as curbs and other vehicles when parking

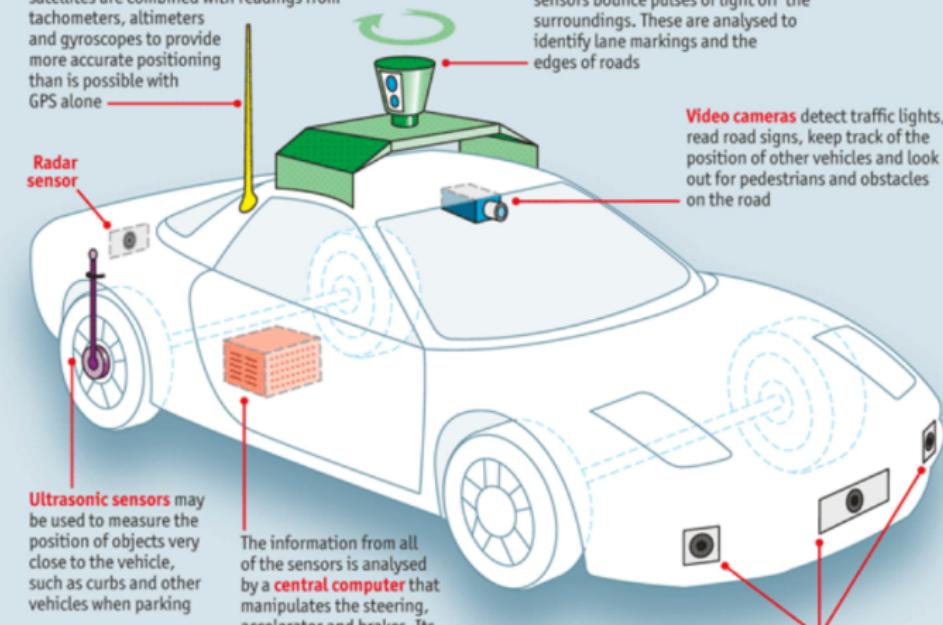

The information from all of the sensors is analysed by a **central computer** that manipulates the steering, accelerator and brakes. Its software must understand the rules of the road, both

**Lidar (light detection and ranging)** sensors bounce pulses of light off the surroundings. These are analysed to identify lane markings and the edges of roads

**Video cameras** detect traffic lights, read road signs, keep track of the position of other vehicles and look out for pedestrians and obstacles on the road

**Radar sensors** monitor the position of other vehicles nearby. Such sensors are already used

## Riksdagens öppna data

Genom öppna data kan alla som vill fritt använda innehållet i riksdagens databaser. Utvecklare, journalister, forskare och andra intresserade kan bygga egna tjänster och ta fram statistik. Öppna data är ett viktigt verktyg för att ge insyn i riksdagens arbete och beslut.

### Dokument

I dokumenten ingår bland annat riksdagsbeslut, regeringens propositioner, ledamöternas motioner och protokoll från kammaren. Vissa dokumenttyper finns från 1961.

### Ledamöter

Information om alla ledamöter som sitter eller har suttit i riksdagen finns från omkring 1990. Det finns uppgifter om ledamoten, olika uppdrag och vad ledamoten sagt och gjort.

### Voteringar

När kammarens ledamöter är oense i en fråga kan det bli omröstning, voting. Uppgifter om votingarna finns från riksmötet 1993/94 och framåt.

### Röstresultat perioden 1993/94–2001/02

Det finns nu ytterligare nio år av omröstningar tillgängliga som dataset. I dataseten kan man se hur varje enskild ledamot har röstat i olika ärenden.

► [Voteringar](#)

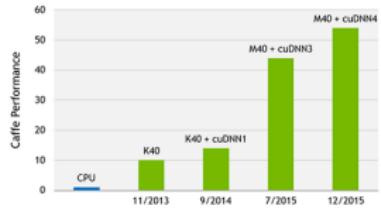

### Diariet i öppna data

Riksdagens diarium finns som dataset i öppna data. Där finns information om ärenden i diariet från den 12 september 2017.

# success stories: maskinöversättning

The screenshot shows a machine translation interface. At the top, it says "DETECT LANGUAGE" followed by "ENGLISH", "SPANISH", and a dropdown menu. Below this, there are two text boxes separated by a double-headed arrow icon. The left text box contains the English sentence "I hit the ball with a bat." The right text box contains the Swedish translation "Jag slår bollen med en fladdermus." Below each text box are a speaker icon, a progress bar indicating "26/5000", and a dropdown menu.

## Data Science

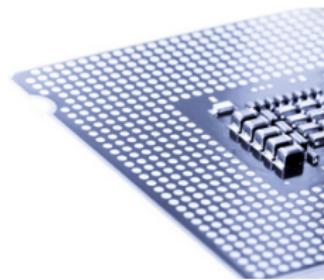

120 credits (MSc, 2 years )

With the digital revolution, Data Science and Artificial Intelligence (AI) has become an important part of our lives and in society as a whole. Vast amounts of data are available in science, industry and other organizations, ranging from molecular biology to social media, from quantum physics to business and retail. In addition, the quickly emerging technologies for processing large-scale data and machine learning is creating a wealth of opportunities, in analyzing such data for understanding and insight, and for building AI systems for new complex tasks, where automated decision making is becoming a reality. Skilled data scientists and AI engineers are in high demand everywhere. With a solid foundation in machine learning, and in understanding the diverse problems of Data Science and AI, you will have a wide range of career opportunities to choose from.

### What is Data Science and AI?

Data Science is a highly cross-disciplinary field concerned with how to extract useful knowledge from data, for deeper understanding and decision support. It is based on a blend of methods in statistics and machine learning, together with computational techniques and algorithms for handling large-scale data. Examples of application areas include biology and other sciences, healthcare, business, finance and different kinds of internet data. Computational methods range from algorithms for collecting and handling large-scale data, statistical methods such as Bayesian modelling, to machine learning techniques such as deep neural networks.

## Applied Data Science, Master's Programme

### About the programme

Big Data is taking centre stage in all areas – business and industry, public policy, the life sciences, natural sciences, humanities and social sciences, and people with knowledge of how to process and analyse large amounts of data has become an increasingly sought after category.

# enstaka kurser inom ML, DS, AI (CSE)

- ▶ databaser
- ▶ introduktion till AI
- ▶ beräkningsmetoder i bioinformatik
- ▶ tillämpad maskininlärning
- ▶ algoritmer för maskininlärning och inferens
- ▶ tekniker för storskaliga data
- ▶ (kommande) avancerad maskininlärning
- ▶ (kommande) maskininlärning för textbehandling

# översikt

introduktion

utbildning inom ML, DS, AI

forskning och exjobb

# CSEs forskning inom DS/ML/AI

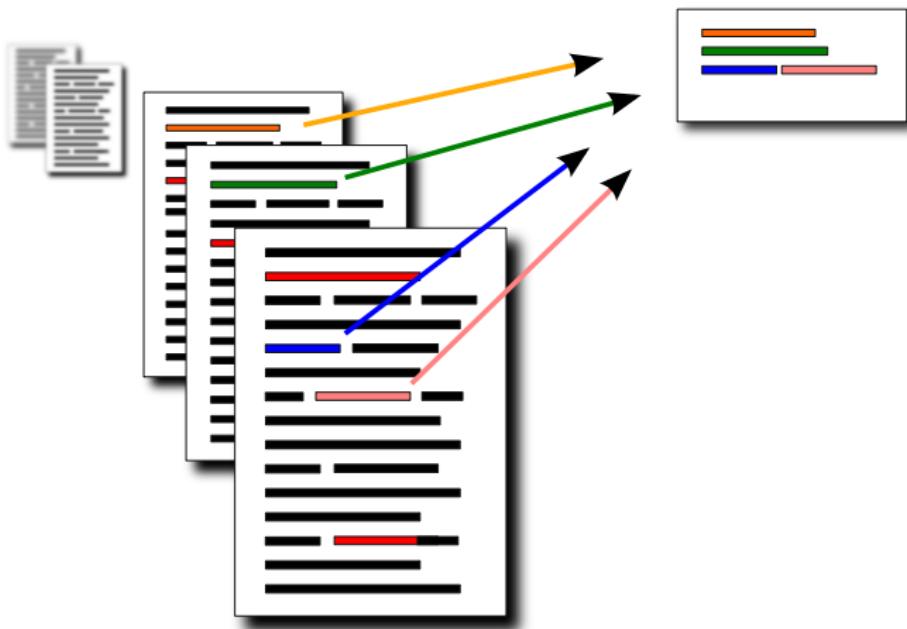

- ▶ **grundforskning:** nya metoder inom maskininlärning

- ▶ **tillämpningar:** biologi, medicin, fordon, text

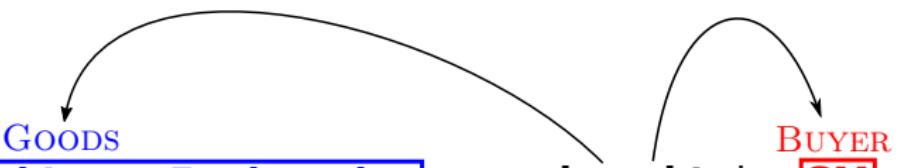

exempel: textsammanfattning
