

## Operating Systems EDA092, DIT400

<http://www.cse.chalmers.se/EDU/OS/>

M. Papatariantafilou  
[www.cse.chalmers.se/~ptrianta](http://www.cse.chalmers.se/~ptrianta)

## Why study Operating Systems

- Where there are computers, there are operating systems....

Picture source: wikipedia

2

## What does an Operating System do:

- Provides a set of services to system users
- Shields between the user and the hardware
- Resource manager:
  - CPU(s)
  - memory
  - I/O devices
  - ....

Picture source: wikipedia

3

## ... to put it another way:

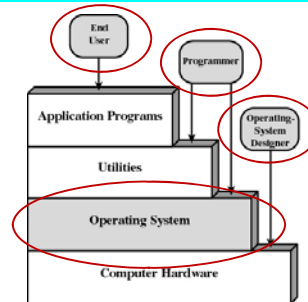

Figure 2.1 Layers and Views of a Computer System

4

## Why study Operating Systems (cont)

- To learn how computers work
- To learn about system design
  - performance vs. simplicity, HW vs. SW, etc.
- To learn how to manage complexity through appropriate abstractions
  - CPU, memory (hierarchy), files, semaphores, etc
  - .
- again: Because computers and OSs are everywhere!

5

## Operating Systems - EDA092

### You will learn about...

- *concurrent* processes
- resource management & deadlocks
- memory management, virtual memory
- processor scheduling
- multiprocessor OS issues
- file systems, distributed file systems
- microkernels and virtual machines
- *instantiation* in established OS
- 2 hand-on **labs**, building OS components

Picture source: cover-page of Modern Operating Systems, A. Tanenbaum

6

## Literature:

- Main textbook:  
Silberschatz, P. Galvin, G.  
Gagne: Operating System  
Concepts, 7e/8e, Wiley  
2005/2009.

7

## Prerequisites

- Machine oriented programming (DAT015, EDA480) or similar.
  - Basic knowledge in low level programming. Familiarity with terms like assembler and interrupt.

8

## Good OS knowledge is helpful!

Besides better understanding  
of computer systems....

The course knowledge is a vital basis for  
understanding further about **networks, parallel and  
distributed systems organization and programming.**
