

Quiz: Types with Class

What is the most general type of each of the functions

Hint:

Eq – things which can be tested for equality

Ord – things with an ordering

Enum – things which can be enumerated in order

Num - numbers

```
f [] = 0
```

```
f (x:xs) = 999
```

```
g (x:xs) (y:ys) = x == y
```

```
g [] ys = False
```

```
h xs =
```

```
[minimum xs .. maximum xs]
```

```
i _ = undefined
```

```
j = (i,i)
```
