Simplest Case: Propositional Logic

Simplest Case: Propositional Logic—Syntax

Syntax of Propositional Logic

Signature

A set of *atomic propositions* AP
(with typical elements p, q, r, \dots)

Propositional Connectives

true, false, \wedge , \vee , \neg , \rightarrow , \leftrightarrow

Set of Propositional Formulas For_0

- ▶ All elements of $AP \cup \{\text{true}, \text{false}\}$ are formulas
- ▶ If ϕ and ψ are formulas then

$$\neg\phi, \quad \phi \wedge \psi, \quad \phi \vee \psi, \quad \phi \rightarrow \psi, \quad \phi \leftrightarrow \psi$$

are also formulas

- ▶ There are no other formulas (inductive definition)

Remark on Concrete Syntax

	Text book	SPIN
Negation	\neg	!
Conjunction	\wedge	&&
Disjunction	\vee	
Implication	\rightarrow, \supset	\rightarrow
Equivalence	\leftrightarrow	\leftrightarrow

Remark on Concrete Syntax

	Text book	SPIN
Negation	\neg	!
Conjunction	\wedge	&&
Disjunction	\vee	
Implication	\rightarrow, \supset	\rightarrow
Equivalence	\leftrightarrow	\leftrightarrow

We use mostly the textbook notation, except for tool-specific slides, input files.

Simplest Case: Propositional Logic

Simplest Case: Propositional Logic

Semantics of Propositional Logic

Interpretation \mathcal{I}

Assigns a truth value to each atomic proposition

$$\mathcal{I} : AP \rightarrow \{T, F\}$$

Semantics of Propositional Logic

Interpretation \mathcal{I}

Assigns a truth value to each atomic proposition

$$\mathcal{I} : AP \rightarrow \{T, F\}$$

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
\vdots	\vdots	\vdots

Semantics of Propositional Logic

Interpretation \mathcal{I}

Assigns a truth value to each atomic proposition

$$\mathcal{I} : AP \rightarrow \{T, F\}$$

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
\vdots	\vdots	\vdots

How to evaluate $p \rightarrow (q \rightarrow p)$ in each interpretation \mathcal{I}_i ?

Semantics of Propositional Logic

Interpretation \mathcal{I}

Assigns a truth value to each atomic proposition

$$\mathcal{I} : AP \rightarrow \{T, F\}$$

Valuation Function

$val_{\mathcal{I}}$: Continuation of \mathcal{I} on For_0

$$val_{\mathcal{I}} : For_0 \rightarrow \{T, F\}$$

$$val_{\mathcal{I}}(\text{true}) = T$$

$$val_{\mathcal{I}}(\text{false}) = F$$

$$val_{\mathcal{I}}(p_i) = \mathcal{I}(p_i)$$

(cont'd on next page)

Semantics of Propositional Logic (Cont'd)

Valuation function (Cont'd)

$$\text{val}_{\mathcal{I}}(\neg\phi) = \begin{cases} T & \text{if } \text{val}_{\mathcal{I}}(\phi) = F \\ F & \text{otherwise} \end{cases}$$

$$\text{val}_{\mathcal{I}}(\phi \wedge \psi) = \begin{cases} T & \text{if } \text{val}_{\mathcal{I}}(\phi) = T \text{ and } \text{val}_{\mathcal{I}}(\psi) = T \\ F & \text{otherwise} \end{cases}$$

$$\text{val}_{\mathcal{I}}(\phi \vee \psi) = \begin{cases} T & \text{if } \text{val}_{\mathcal{I}}(\phi) = T \text{ or } \text{val}_{\mathcal{I}}(\psi) = T \\ F & \text{otherwise} \end{cases}$$

$$\text{val}_{\mathcal{I}}(\phi \rightarrow \psi) = \begin{cases} T & \text{if } \text{val}_{\mathcal{I}}(\phi) = F \text{ or } \text{val}_{\mathcal{I}}(\psi) = T \\ F & \text{otherwise} \end{cases}$$

$$\text{val}_{\mathcal{I}}(\phi \leftrightarrow \psi) = \begin{cases} T & \text{if } \text{val}_{\mathcal{I}}(\phi) = \text{val}_{\mathcal{I}}(\psi) \\ F & \text{otherwise} \end{cases}$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
	\dots	

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
...		

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$val_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) =$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
...		

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$\text{val}_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } \text{val}_{\mathcal{I}_2}(p) = F \text{ or } \text{val}_{\mathcal{I}_2}(q \rightarrow p) = T$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
...		

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$\begin{aligned} \text{val}_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) &= T \text{ iff } \text{val}_{\mathcal{I}_2}(p) = F \text{ or } \text{val}_{\mathcal{I}_2}(q \rightarrow p) = T \\ \text{val}_{\mathcal{I}_2}(p) &= \end{aligned}$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
...		

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$\begin{aligned} \text{val}_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) &= T \text{ iff } \text{val}_{\mathcal{I}_2}(p) = F \text{ or } \text{val}_{\mathcal{I}_2}(q \rightarrow p) = T \\ \text{val}_{\mathcal{I}_2}(p) &= \mathcal{I}_2(p) = \end{aligned}$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F
...		

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$\begin{aligned} \text{val}_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) &= T \text{ iff } \text{val}_{\mathcal{I}_2}(p) = F \text{ or } \text{val}_{\mathcal{I}_2}(q \rightarrow p) = T \\ \text{val}_{\mathcal{I}_2}(p) &= \mathcal{I}_2(p) = T \end{aligned}$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F

...

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$val_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } val_{\mathcal{I}_2}(p) = F \text{ or } val_{\mathcal{I}_2}(q \rightarrow p) = T$$

$$val_{\mathcal{I}_2}(p) = \mathcal{I}_2(p) = T$$

$$val_{\mathcal{I}_2}(q \rightarrow p) =$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F

...

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$val_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } val_{\mathcal{I}_2}(p) = F \text{ or } val_{\mathcal{I}_2}(q \rightarrow p) = T$$

$$val_{\mathcal{I}_2}(p) = \mathcal{I}_2(p) = T$$

$$val_{\mathcal{I}_2}(q \rightarrow p) = T \text{ iff } val_{\mathcal{I}_2}(q) = F \text{ or } val_{\mathcal{I}_2}(p) = T$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F

...

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$\text{val}_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } \text{val}_{\mathcal{I}_2}(p) = F \text{ or } \text{val}_{\mathcal{I}_2}(q \rightarrow p) = T$$

$$\text{val}_{\mathcal{I}_2}(p) = \mathcal{I}_2(p) = T$$

$$\text{val}_{\mathcal{I}_2}(q \rightarrow p) = T \text{ iff } \text{val}_{\mathcal{I}_2}(q) = F \text{ or } \text{val}_{\mathcal{I}_2}(p) = T$$

$$\text{val}_{\mathcal{I}_2}(q) =$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F

...

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$val_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } val_{\mathcal{I}_2}(p) = F \text{ or } val_{\mathcal{I}_2}(q \rightarrow p) = T$$

$$val_{\mathcal{I}_2}(p) = \mathcal{I}_2(p) = T$$

$$val_{\mathcal{I}_2}(q \rightarrow p) = T \text{ iff } val_{\mathcal{I}_2}(q) = F \text{ or } val_{\mathcal{I}_2}(p) = T$$

$$val_{\mathcal{I}_2}(q) = \mathcal{I}_2(q) =$$

Valuation Examples

Example

Let $AP = \{p, q\}$

$$p \rightarrow (q \rightarrow p)$$

	p	q
\mathcal{I}_1	F	F
\mathcal{I}_2	T	F

...

How to evaluate $p \rightarrow (q \rightarrow p)$ in \mathcal{I}_2 ?

$$val_{\mathcal{I}_2}(p \rightarrow (q \rightarrow p)) = T \text{ iff } val_{\mathcal{I}_2}(p) = F \text{ or } val_{\mathcal{I}_2}(q \rightarrow p) = T$$

$$val_{\mathcal{I}_2}(p) = \mathcal{I}_2(p) = T$$

$$val_{\mathcal{I}_2}(q \rightarrow p) = T \text{ iff } val_{\mathcal{I}_2}(q) = F \text{ or } val_{\mathcal{I}_2}(p) = T$$

$$val_{\mathcal{I}_2}(q) = \mathcal{I}_2(q) = F$$

Semantic Notions of Propositional Logic

Let $\phi \in For_0$, $\Gamma \subseteq For_0$

Definition (Satisfying Interpretation, Consequence Relation)

\mathcal{I} satisfies ϕ (write: $\mathcal{I} \models \phi$) iff $val_{\mathcal{I}}(\phi) = T$

ϕ follows from Γ (write: $\Gamma \models \phi$) iff for all interpretations \mathcal{I} :

If $\mathcal{I} \models \psi$ for all $\psi \in \Gamma$, then also $\mathcal{I} \models \phi$

Semantic Notions of Propositional Logic

Let $\phi \in For_0$, $\Gamma \subseteq For_0$

Definition (Satisfying Interpretation, Consequence Relation)

\mathcal{I} satisfies ϕ (write: $\mathcal{I} \models \phi$) iff $val_{\mathcal{I}}(\phi) = T$

ϕ follows from Γ (write: $\Gamma \models \phi$) iff for all interpretations \mathcal{I} :

If $\mathcal{I} \models \psi$ for all $\psi \in \Gamma$, then also $\mathcal{I} \models \phi$

Definition (Satisfiability, Validity)

A formula is **satisfiable** if it is satisfied by **some** interpretation.

If **every** interpretation satisfies ϕ (write: $\models \phi$) then ϕ is called **valid**.

Semantics of Propositional Logic: Examples

Formula (same as before)

$$p \rightarrow (q \rightarrow p)$$

Semantics of Propositional Logic: Examples

Formula (same as before)

$$p \rightarrow (q \rightarrow p)$$

Is this formula valid?

$$\models p \rightarrow (q \rightarrow p) ?$$

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

Other Satisfying Interpretations?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Other Satisfying Interpretations?

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Other Satisfying Interpretations?

Therefore, not valid!

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Other Satisfying Interpretations?

Therefore, not valid!

$$p \wedge ((\neg p) \vee q) \models q \vee r$$

Does it hold?

Semantics of Propositional Logic: Examples

$$p \wedge ((\neg p) \vee q)$$

Satisfiable?

Satisfying Interpretation?

$$\mathcal{I}(p) = T, \mathcal{I}(q) = T$$

Other Satisfying Interpretations?

Therefore, not valid!

$$p \wedge ((\neg p) \vee q) \models q \vee r$$

Does it hold? Yes. Why?

Transition Systems (aka Kripke Structures)

We assume $AP = \{p, q\}$

Notation

Transition Systems (aka Kripke Structures)

- ▶ Each state has *its own* interpretation $\mathcal{I} : \{p, q\} \rightarrow \{T, F\}$
 - ▶ Convention: list interpretation of variables in lexicographic order
- ▶ Computations, or **runs**, are *infinite* paths through states
 - ▶ 'finite' runs simulated by looping on terminal state
- ▶ Prefix of some example runs:
 - ▶ $s s' s'' s' s'' s' s'' s''' \dots$
 - ▶ $s s' s'' s''' s'' s' s'' s' \dots$

Formal Verification: Model Checking

Transition System of some PROMELA Model

```
bool p, q;  
p = true; q = p;  
do :: q = false; q = p  
    :: p = false; p = true  
od
```

(assignments only for illustration, not part of transition system)

Transition Systems: Formal Definition

Definition (Transition System)

A **transition system** $\mathcal{T} = (S, \rightarrow, S_0, L)$ is composed of a set of **states** S , a **transition relation** $\rightarrow \subseteq S \times S$, a set $\emptyset \neq S_0 \subseteq S$ of **initial states**, and a **labeling** L of each state $s \in S$ with a propositional interpretation $L(s)$.

Transition Systems: Formal Definition

Definition (Transition System)

A **transition system** $\mathcal{T} = (S, \rightarrow, S_0, L)$ is composed of a set of **states** S , a **transition relation** $\rightarrow \subseteq S \times S$, a set $\emptyset \neq S_0 \subseteq S$ of **initial states**, and a **labeling** L of each state $s \in S$ with a propositional interpretation $L(s)$.

Definition (Run of Transition System)

A **run of** $\mathcal{T} = (S, \rightarrow, S_0, L)$ is a sequence of states

$$\sigma = s_0 s_1 s_2 \dots$$

such that $s_0 \in S_0$ and $s_i \rightarrow s_{i+1}$ for all $i \geq 0$.

Transition Systems: Formal Definition

Definition (Transition System)

A **transition system** $\mathcal{T} = (S, \rightarrow, S_0, L)$ is composed of a set of **states** S , a **transition relation** $\rightarrow \subseteq S \times S$, a set $\emptyset \neq S_0 \subseteq S$ of **initial states**, and a **labeling** L of each state $s \in S$ with a propositional interpretation $L(s)$.

Definition (Run of Transition System)

A **run of** $\mathcal{T} = (S, \rightarrow, S_0, L)$ is a sequence of states

$$\sigma = s_0 s_1 s_2 \dots$$

such that $s_0 \in S_0$ and $s_i \rightarrow s_{i+1}$ for all $i \geq 0$.

Definition (Trace)

The **trace** $tr(\sigma)$ of a run $\sigma = s_0 s_1 s_2 \dots$ is the sequence

$$\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$$

such that $\mathcal{I}_i = L(s_i)$.

A **trace of transition system** \mathcal{T} is $tr(\sigma)$ for any run σ of \mathcal{T} .

Runs and Traces Visually

- ▶ Given a run $\sigma = s_0 s_1 s_2 s_3 s_4 \dots$

- ▶ Each state s of a transition system is labelled, via $L(s)$, with an interpretation

- ▶ If we name each interpretations $L(s_i)$ as \mathcal{I}_i , we have

- ▶ The trace $tr(\sigma)$ is: $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \mathcal{I}_3 \mathcal{I}_4 \dots$

Notations: Power Set and Sequences

Assume sets X and Y .

Power Set

2^X is the set of all subsets of X (called 'power set of X ').

Finite Sequences

Y^* is the set of all finite sequences (words) of elements of Y .

Infinite Sequences

Y^ω is the set of all infinite sequences (words) of elements of Y .

Examples of Power Sets and Sequences

Given the set of atomic propositions $AP = \{p, q\}$.

Power Set

$$2^{AP} = \{ \{\}, \{p\}, \{q\}, \{p, q\} \}$$

Finite Sequences

$(2^{AP})^*$: set of all finite sequences of elements of 2^{AP} .

E.g.: $\{p\}\{\}\{p, q\}\{p\} \in (2^{AP})^*$

(and infinitely many others)

Infinite Sequences

$(2^{AP})^\omega$: set of all infinite sequences of elements of 2^{AP} .

E.g.: $\{p\}\{p, q\}\{p\}\{\}\{p\}\{p, q\}\{p\}\{\}\dots \in (2^{AP})^\omega$

(and uncountably many others)

Interpretations as Sets

Interpretations over atomic propositions AP can be represented as elements of 2^{AP} .

Interpretations as Sets

Interpretations over atomic propositions AP can be represented as elements of 2^{AP} .

E.g., assume $AP = \{p, q\}$

I.e., $2^{AP} = \{ \{\}, \{p\}, \{q\}, \{p, q\} \}$

Interpretations as Sets

Interpretations over atomic propositions AP can be represented as elements of 2^{AP} .

E.g., assume $AP = \{p, q\}$

I.e., $2^{AP} = \{ \{\}, \{p\}, \{q\}, \{p, q\} \}$

$\frac{p \quad q}{\mathcal{I}_1 \quad F \quad F}$	represented as	$\{\}$
$\frac{p \quad q}{\mathcal{I}_2 \quad T \quad F}$	represented as	$\{p\}$
$\frac{p \quad q}{\mathcal{I}_3 \quad F \quad T}$	represented as	$\{q\}$
$\frac{p \quad q}{\mathcal{I}_4 \quad T \quad T}$	represented as	$\{p, q\}$

Runs and Traces revisited

Given states S and atomic propositions AP .

- ▶ A run $\sigma = s_0 s_1 s_2 s_3 s_4 \dots$ is an element of S^ω

Runs and Traces revisited

Given states S and atomic propositions AP .

- ▶ A run $\sigma = s_0 s_1 s_2 s_3 s_4 \dots$ is an element of S^ω
- ▶ A trace $\tau = I_0 I_1 I_2 I_3 \dots$ is an element of $(2^{AP})^\omega$

Runs and Traces revisited

Given states S and atomic propositions AP .

- ▶ A run $\sigma = s_0 s_1 s_2 s_3 s_4 \dots$ is an element of S^ω
- ▶ A trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \mathcal{I}_3 \dots$ is an element of $(2^{AP})^\omega$

An example of a trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \mathcal{I}_3 \dots$ may look like:

$$\tau = \{p\}\{p, q\}\{p\}\{\} \dots$$

Linear Time Properties

Definition (Linear Time Property)

Given a set of atomic propositions AP .

Each subset $P \subseteq (2^{AP})^\omega$ is a **linear time (LT) property** over AP .

Linear Time Properties

Definition (Linear Time Property)

Given a set of atomic propositions AP .

Each subset $P \subseteq (2^{AP})^\omega$ is a **linear time (LT) property** over AP .

Intuition:

- ▶ Assume a trace property $P \subseteq (2^{AP})^\omega$.
- ▶ A trace τ **fulfils** the property P iff $\tau \in P$.
- ▶ A trace τ **violates** the property P iff $\tau \in (2^{AP})^\omega \setminus P$ (i.e., $\tau \notin P$).

Classes of LT Properties

The LT properties can be divided in three classes:

Classes of LT Properties

The LT properties can be divided in three classes:

- ▶ Safety properties
- ▶ Liveness properties
- ▶ Properties that are neither safety nor liveness properties

Definition (Safety Properties, Bad Prefixes)

An LT property P_{safe} over AP is called a *safety property* if for all traces $\tau \in (2^{AP})^\omega \setminus P_{safe}$, there exists a **finite prefix** $\hat{\tau}$ of τ such that

Safety Properties

Definition (Safety Properties, Bad Prefixes)

An LT property P_{safe} over AP is called a *safety property* if for all traces $\tau \in (2^{AP})^\omega \setminus P_{safe}$, there exists a **finite prefix** $\hat{\tau}$ of τ such that

$$\left\{ \tau' \in (2^{AP})^\omega \mid \hat{\tau} \text{ is a finite prefix of } \tau' \right\} \cap P_{safe} = \emptyset$$

Safety Properties

Definition (Safety Properties, Bad Prefixes)

An LT property P_{safe} over AP is called a *safety property* if for all traces $\tau \in (2^{AP})^\omega \setminus P_{safe}$, there exists a **finite prefix** $\hat{\tau}$ of τ such that

$$\{\tau' \in (2^{AP})^\omega \mid \hat{\tau} \text{ is a finite prefix of } \tau'\} \cap P_{safe} = \emptyset$$

- ▶ Each **violating trace** τ has a **finite, 'bad prefix'** $\hat{\tau}$ that cannot be extended to a safe trace.

Safety Properties

Definition (Safety Properties, Bad Prefixes)

An LT property P_{safe} over AP is called a *safety property* if for all traces $\tau \in (2^{AP})^\omega \setminus P_{safe}$, there exists a **finite prefix** $\hat{\tau}$ of τ such that

$$\{\tau' \in (2^{AP})^\omega \mid \hat{\tau} \text{ is a finite prefix of } \tau'\} \cap P_{safe} = \emptyset$$

- ▶ Each **violating trace** τ has a **finite, 'bad prefix'** $\hat{\tau}$ that cannot be extended to a safe trace.
- ▶ A safety violation manifests itself in **finite** time, and cannot be repaired thereafter.

Liveness Properties

Let $\text{pref}(P)$ be the set of **finite** prefixes of elements of P .

Liveness Properties

Let $\text{pref}(P)$ be the set of **finite** prefixes of elements of P .

Definition (Liveness Properties)

An LT property P_{live} over AP is called a **liveness property** whenever $\text{pref}(P_{\text{live}}) = (2^{AP})^*$

Liveness Properties

Let $\text{pref}(P)$ be the set of **finite** prefixes of elements of P .

Definition (Liveness Properties)

An LT property P_{live} over AP is called a **liveness property** whenever $\text{pref}(P_{\text{live}}) = (2^{AP})^*$

A liveness property

- ▶ **allows every finite prefix**

Liveness Properties

Let $\text{pref}(P)$ be the set of **finite** prefixes of elements of P .

Definition (Liveness Properties)

An LT property P_{live} over AP is called a **liveness property** whenever $\text{pref}(P_{\text{live}}) = (2^{AP})^*$

A liveness property

- ▶ **allows every finite prefix**
- ▶ cannot be refuted in finite time

Linear Temporal Logic

An extension of propositional logic that allows to specify **properties of all traces**

Linear Temporal Logic—Syntax

An extension of propositional logic that allows to specify **properties of all traces**

Syntax

Based on propositional signature and syntax.

Extension with three connectives (in this course):

Always If ϕ is a formula, then so is $\Box\phi$

Eventually If ϕ is a formula, then so is $\Diamond\phi$

Until If ϕ and ψ are formulas, then so is $\phi\mathcal{U}\psi$

Concrete Syntax

	text book	SPIN
Always	\Box	$[]$
Eventually	\Diamond	$\langle \rangle$
Until	\mathcal{U}	\mathcal{U}

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

▶ p

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$
- ▶ $\diamond p$

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$
- ▶ $\diamond p$
- ▶ $\square q$

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$
- ▶ $\diamond p$
- ▶ $\square q$
- ▶ $\diamond \square (p \rightarrow q)$

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$
- ▶ $\diamond p$
- ▶ $\square q$
- ▶ $\diamond \square (p \rightarrow q)$
- ▶ $(\square p) \rightarrow ((\diamond p) \vee \neg q)$

Linear Temporal Logic Syntax: Examples

Let $AP = \{p, q\}$ be the set of propositional variables.

- ▶ p
- ▶ false
- ▶ $p \rightarrow q$
- ▶ $\diamond p$
- ▶ $\square q$
- ▶ $\diamond \square (p \rightarrow q)$
- ▶ $(\square p) \rightarrow ((\diamond p) \vee \neg q)$
- ▶ $p \mathcal{U} (\square q)$

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models p$ iff $\mathcal{I}_0(p) = T$, for $p \in AP$.

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models p$ iff $\mathcal{I}_0(p) = T$, for $p \in AP$.

$\tau \models \neg\phi$ iff not $\tau \models \phi$ (write $\tau \not\models \phi$)

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

- $\tau \models p$ iff $\mathcal{I}_0(p) = T$, for $p \in AP$.
- $\tau \models \neg\phi$ iff not $\tau \models \phi$ (write $\tau \not\models \phi$)
- $\tau \models \phi \wedge \psi$ iff $\tau \models \phi$ and $\tau \models \psi$

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models p$	iff	$\mathcal{I}_0(p) = T$, for $p \in AP$.
$\tau \models \neg\phi$	iff	not $\tau \models \phi$ (write $\tau \not\models \phi$)
$\tau \models \phi \wedge \psi$	iff	$\tau \models \phi$ and $\tau \models \psi$
$\tau \models \phi \vee \psi$	iff	$\tau \models \phi$ or $\tau \models \psi$
$\tau \models \phi \rightarrow \psi$	iff	$\tau \not\models \phi$ or $\tau \models \psi$

Valuation of temporal formula relative to a
trace (infinite sequence of interpretations)

Definition (Validity Relation)

Validity of temporal formula depends on traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models p$	iff	$\mathcal{I}_0(p) = T$, for $p \in AP$.
$\tau \models \neg\phi$	iff	not $\tau \models \phi$ (write $\tau \not\models \phi$)
$\tau \models \phi \wedge \psi$	iff	$\tau \models \phi$ and $\tau \models \psi$
$\tau \models \phi \vee \psi$	iff	$\tau \models \phi$ or $\tau \models \psi$
$\tau \models \phi \rightarrow \psi$	iff	$\tau \not\models \phi$ or $\tau \models \psi$

Temporal connectives?

Temporal Logic—Semantics (Cont'd)

Trace τ

Temporal Logic—Semantics (Cont'd)

Trace τ

If $\tau = I_0 I_1 I_2 \dots$, then $\tau|_i$ denotes the **suffix** $I_i I_{i+1} I_{i+2} \dots$ of τ .

Temporal Logic—Semantics (Cont'd)

Trace τ

If $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$, then $\tau|_i$ denotes the **suffix** $\mathcal{I}_i \mathcal{I}_{i+1} \mathcal{I}_{i+2} \dots$ of τ .

Definition (Validity Relation for Temporal Connectives)

Given a trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

Temporal Logic—Semantics (Cont'd)

Trace τ

If $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$, then $\tau|_i$ denotes the **suffix** $\mathcal{I}_i \mathcal{I}_{i+1} \mathcal{I}_{i+2} \dots$ of τ .

Definition (Validity Relation for Temporal Connectives)

Given a trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models \Box \phi$ iff $\tau|_k \models \phi$ for **all** $k \geq 0$

Temporal Logic—Semantics (Cont'd)

Trace τ

If $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$, then $\tau|_i$ denotes the **suffix** $\mathcal{I}_i \mathcal{I}_{i+1} \mathcal{I}_{i+2} \dots$ of τ .

Definition (Validity Relation for Temporal Connectives)

Given a trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models \Box\phi$ iff $\tau|_k \models \phi$ for **all** $k \geq 0$

$\tau \models \Diamond\phi$ iff $\tau|_k \models \phi$ for **some** $k \geq 0$

Temporal Logic—Semantics (Cont'd)

Trace τ

If $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$, then $\tau|_i$ denotes the **suffix** $\mathcal{I}_i \mathcal{I}_{i+1} \mathcal{I}_{i+2} \dots$ of τ .

Definition (Validity Relation for Temporal Connectives)

Given a trace $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

$\tau \models \Box \phi$ iff $\tau|_k \models \phi$ for **all** $k \geq 0$

$\tau \models \Diamond \phi$ iff $\tau|_k \models \phi$ for **some** $k \geq 0$

$\tau \models \phi \mathcal{U} \psi$ iff $\tau|_k \models \psi$ for **some** $k \geq 0$, and $\tau|_j \models \phi$ for **all** $0 \leq j < k$
(if $k = 0$ then ϕ needs never hold)

Safety and Liveness Formulas

Safety Formulas

- ▶ Formulas describing a safety property

- ▶ Example:

$$\square (\neg P_in_CS \vee \neg Q_in_CS)$$

'simultaneous visit to the critical sections never happens'

- ▶ Often state that **"something bad never happens"**

Safety and Liveness Formulas

Safety Formulas

- ▶ Formulas describing a safety property
- ▶ Example:
 $\Box (\neg P_in_CS \vee \neg Q_in_CS)$
'simultaneous visit to the critical sections never happens'
- ▶ Often state that **"something bad never happens"**

Liveness Formulas

- ▶ Formulas describing a liveness property
- ▶ Example:
 $\Diamond P_in_CS$
'P enters its critical section eventually'
- ▶ Often state that **"something good happens eventually"**

Complex Properties

What does this mean?

$$\tau \models \Box \Diamond \phi$$

Infinitely Often

$$\tau \models \Box\Diamond\phi$$

“During trace τ the formula ϕ becomes true infinitely often”

Validity of Temporal Logic

Definition (Validity)

ϕ is **valid**, write $\models \phi$, iff $\tau \models \phi$ for **all** traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

Validity of Temporal Logic

Definition (Validity)

ϕ is **valid**, write $\models \phi$, iff $\tau \models \phi$ for **all** traces $\tau = \mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$

Representation of Traces

Can represent a set of traces as a sequence of propositional formulas:

- ▶ $\phi_0 \phi_1 \phi_2 \dots$ represents all traces $\mathcal{I}_0 \mathcal{I}_1 \mathcal{I}_2 \dots$ such that $\mathcal{I}_i \models \phi_i$ for $i \geq 0$

Semantics of Temporal Logic: Examples

$\diamond\Box\phi$

Valid?

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Valid in some trace?

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Valid in some trace?

Yes, for example: $(\neg \phi \phi \phi \dots)$

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Valid in some trace?

Yes, for example: $(\neg \phi \phi \phi \dots)$

$$\square \phi \rightarrow \phi$$

$$(\neg \square \phi) \leftrightarrow (\diamond \neg \phi)$$

$$\diamond \phi \leftrightarrow (\text{true } \mathcal{U} \phi)$$

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Valid in some trace?

Yes, for example: $(\neg \phi \phi \phi \dots)$

$$\square \phi \rightarrow \phi$$

$$(\neg \square \phi) \leftrightarrow (\diamond \neg \phi)$$

$$\diamond \phi \leftrightarrow (\text{true } \mathcal{U} \phi)$$

All are valid! (proof is exercise)

Semantics of Temporal Logic: Examples

$$\diamond \square \phi$$

Valid?

No, there is a trace where it is not valid:

$$(\neg \phi \neg \phi \neg \phi \dots)$$

Valid in some trace?

Yes, for example: $(\neg \phi \phi \phi \dots)$

$$\square \phi \rightarrow \phi$$

$$(\neg \square \phi) \leftrightarrow (\diamond \neg \phi)$$

$$\diamond \phi \leftrightarrow (\text{true } \mathcal{U} \phi)$$

All are valid! (proof is exercise)

- ▶ \square is reflexive
- ▶ \square and \diamond are dual connectives
- ▶ \square and \diamond can be expressed with only using \mathcal{U}

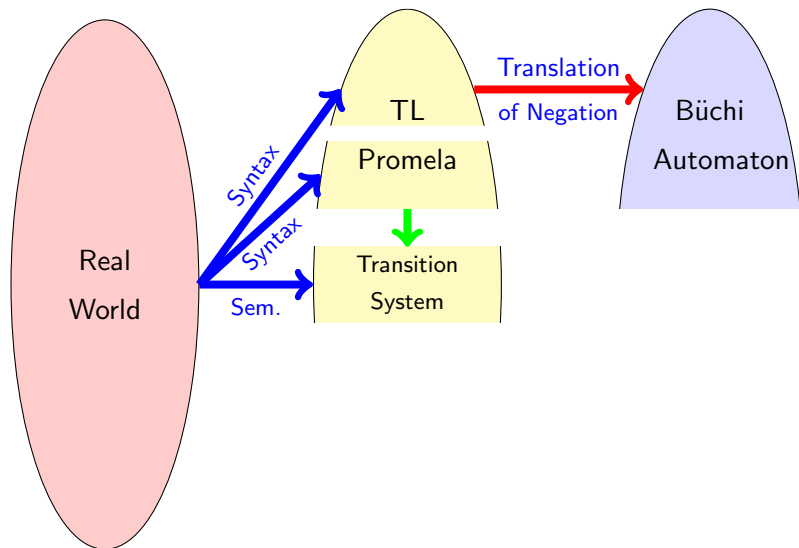

Temporal Logic—Semantics (Cont'd)

Extension of validity of temporal formulas to **transition systems**:

Definition (Validity Relation)

Given a transition system $\mathcal{T} = (S, \rightarrow, S_0, L)$, a temporal formula ϕ is **valid in \mathcal{T}** (write $\mathcal{T} \models \phi$) iff $\tau \models \phi$ for all traces τ of \mathcal{T} .

Formal Verification: Model Checking

Given a finite alphabet (vocabulary) Σ

A word $w \in \Sigma^*$ is a finite sequence

$$w = a_0 \dots a_n$$

with $a_i \in \Sigma, i \in \{0, \dots, n\}$

$\mathcal{L} \subseteq \Sigma^*$ is called a **language**

Given a finite alphabet (vocabulary) Σ

An ω -word $w \in \Sigma^\omega$ is an infinite sequence

$$w = a_0 \dots a_k \dots$$

with $a_i \in \Sigma, i \in \mathbb{N}$

$\mathcal{L}^\omega \subseteq \Sigma^\omega$ is called an ω -language

Büchi Automaton

Definition (Büchi Automaton)

A (non-deterministic) **Büchi automaton** over an alphabet Σ consists of a

- ▶ finite, non-empty set of **locations** Q
- ▶ a transition relation $\delta \subseteq Q \times \Sigma \times Q$
- ▶ a non-empty set of **initial** locations $Q_0 \subseteq Q$
- ▶ a set of **accepting** locations $F = \{f_1, \dots, f_n\} \subseteq Q$

Büchi Automaton

Definition (Büchi Automaton)

A (non-deterministic) **Büchi automaton** over an alphabet Σ consists of a

- ▶ finite, non-empty set of **locations** Q
- ▶ a transition relation $\delta \subseteq Q \times \Sigma \times Q$
- ▶ a non-empty set of **initial** locations $Q_0 \subseteq Q$
- ▶ a set of **accepting** locations $F = \{f_1, \dots, f_n\} \subseteq Q$

Example

$\Sigma = \{a, b\}$, $Q = \{q_1, q_2, q_3\}$, $I = \{q_1\}$, $F = \{q_2\}$

Definition (Execution)

Let $\mathcal{B} = (Q, \delta, Q_0, F)$ be a Büchi automaton over alphabet Σ .

An **execution** of \mathcal{B} is a pair (w, v) , with

▶ $w = a_0 \dots a_k \dots \in \Sigma^\omega$

▶ $v = q_0 \dots q_k \dots \in Q^\omega$

where $q_0 \in Q_0$, and $(q_i, a_i, q_{i+1}) \in \delta$, for all $i \in \mathbb{N}$

Büchi Automaton—Executions and Accepted Words

Definition (Execution)

Let $\mathcal{B} = (Q, \delta, Q_0, F)$ be a Büchi automaton over alphabet Σ .

An **execution** of \mathcal{B} is a pair (w, v) , with

▶ $w = a_0 \dots a_k \dots \in \Sigma^\omega$

▶ $v = q_0 \dots q_k \dots \in Q^\omega$

where $q_0 \in Q_0$, and $(q_i, a_i, q_{i+1}) \in \delta$, for all $i \in \mathbb{N}$

Definition (Accepted Word)

A Büchi automaton \mathcal{B} **accepts** a word $w \in \Sigma^\omega$, if there **exists** an execution (w, v) of \mathcal{B} where **some accepting location** $f \in F$ appears **infinitely** often in v .

Büchi Automaton—Language

Let $\mathcal{B} = (Q, \delta, Q_0, F)$ be a Büchi automaton, then

$$\mathcal{L}^\omega(\mathcal{B}) = \{w \in \Sigma^\omega \mid \mathcal{B} \text{ accepts } w\}$$

denotes the ω -language recognised by \mathcal{B} .

Büchi Automaton—Language

Let $\mathcal{B} = (Q, \delta, Q_0, F)$ be a Büchi automaton, then

$$\mathcal{L}^\omega(\mathcal{B}) = \{w \in \Sigma^\omega \mid \mathcal{B} \text{ accepts } w\}$$

denotes the ω -language recognised by \mathcal{B} .

An ω -language for which an accepting Büchi automaton exists is called ω -regular language.

Example, ω -Regular Expression

Which language is accepted by the following Büchi automaton?

Example, ω -Regular Expression

Which language is accepted by the following Büchi automaton?

Solution: $(a + b)^*(ab)^\omega$

[NB: $(ab)^\omega = a(ba)^\omega$]

Example, ω -Regular Expression

Which language is accepted by the following Büchi automaton?

Solution: $(a + b)^*(ab)^\omega$ [NB: $(ab)^\omega = a(ba)^\omega$]

ω -regular expressions similar to standard regular expression

ab a followed by b

$a + b$ a or b

a^* arbitrarily, but **finitely** often a

new: a^ω **infinitely** often a

Büchi Automata—More Examples

Language:

Büchi Automata—More Examples

Language: $a(a + ba)^\omega$

Büchi Automata—More Examples

Language: $a(a + ba)^\omega$

Language:

Büchi Automata—More Examples

Language: $a(a + ba)^\omega$

Language: $(a^*ba)^\omega$

Decidability, Closure Properties

Many properties for regular finite automata hold also for Büchi automata

Theorem (Decidability)

It is decidable whether the accepted language $\mathcal{L}^\omega(\mathcal{B})$ of a Büchi automaton \mathcal{B} is empty.

Decidability, Closure Properties

Many properties for regular finite automata hold also for Büchi automata

Theorem (Decidability)

It is decidable whether the accepted language $\mathcal{L}^\omega(\mathcal{B})$ of a Büchi automaton \mathcal{B} is empty.

Theorem (Closure properties)

The set of ω -regular languages is closed with respect to intersection, union and complement:

- ▶ *if $\mathcal{L}_1, \mathcal{L}_2$ are ω -regular then $\mathcal{L}_1 \cap \mathcal{L}_2$ and $\mathcal{L}_1 \cup \mathcal{L}_2$ are ω -regular*
- ▶ *\mathcal{L} is ω -regular then $\Sigma^\omega \setminus \mathcal{L}$ is ω -regular*

Decidability, Closure Properties

Many properties for regular finite automata hold also for Büchi automata

Theorem (Decidability)

It is decidable whether the accepted language $\mathcal{L}^\omega(\mathcal{B})$ of a Büchi automaton \mathcal{B} is empty.

Theorem (Closure properties)

The set of ω -regular languages is closed with respect to intersection, union and complement:

- ▶ *if $\mathcal{L}_1, \mathcal{L}_2$ are ω -regular then $\mathcal{L}_1 \cap \mathcal{L}_2$ and $\mathcal{L}_1 \cup \mathcal{L}_2$ are ω -regular*
- ▶ *\mathcal{L} is ω -regular then $\Sigma^\omega \setminus \mathcal{L}$ is ω -regular*

But in contrast to regular finite automata:

Non-deterministic Büchi automata are strictly more expressive than deterministic ones.

Formal Verification: Model Checking

Linear Temporal Logic and Büchi Automata

LTL and Büchi Automata are connected

Recall

Definition (Validity Relation)

Given a transition system $\mathcal{T} = (S, \rightarrow, S_0, L)$, a temporal formula ϕ is **valid in \mathcal{T}** (write $\mathcal{T} \models \phi$) iff $\tau \models \phi$ for all traces τ of \mathcal{T} .

A trace of the transition system is an infinite sequence of interpretations.

Linear Temporal Logic and Büchi Automata

LTL and Büchi Automata are connected

Recall

Definition (Validity Relation)

Given a transition system $\mathcal{T} = (S, \rightarrow, S_0, L)$, a temporal formula ϕ is **valid in \mathcal{T}** (write $\mathcal{T} \models \phi$) iff $\tau \models \phi$ for all traces τ of \mathcal{T} .

A trace of the transition system is an infinite sequence of interpretations.

Intended Connection

Given an LTL formula ϕ :

Construct a Büchi automaton accepting exactly those traces (infinite sequences of interpretations) that satisfy ϕ .

Encoding an LTL Formula as a Büchi Automaton

AP set of propositional variables, e.g., $AP = \{r, s\}$

Suitable alphabet Σ for Büchi automaton?

Encoding an LTL Formula as a Büchi Automaton

AP set of propositional variables, e.g., $AP = \{r, s\}$

Suitable alphabet Σ for Büchi automaton?

A state transition of Büchi automaton must represent an interpretation.

Encoding an LTL Formula as a Büchi Automaton

AP set of propositional variables, e.g., $AP = \{r, s\}$

Suitable alphabet Σ for Büchi automaton?

A state transition of Büchi automaton must represent an interpretation.

Choose Σ to be the set of all **interpretations over AP** , encoded as 2^{AP} .

(Recall slide 'Interpretations as Sets')

Example

$$\Sigma = \{\emptyset, \{r\}, \{s\}, \{r, s\}\}$$

Büchi Automaton for LTL Formula By Example

Example (Büchi automaton for formula r over $AP = \{r, s\}$)

A Büchi automaton \mathcal{B} accepting exactly those traces τ satisfying r

Büchi Automaton for LTL Formula By Example

Example (Büchi automaton for formula r over $AP = \{r, s\}$)

A Büchi automaton \mathcal{B} accepting exactly those traces τ satisfying r

In the first interpretation \mathcal{I}_0 (of τ), r must hold, the rest is arbitrary

Büchi Automaton for LTL Formula By Example

Example (Büchi automaton for formula r over $AP = \{r, s\}$)

A Büchi automaton \mathcal{B} accepting exactly those traces τ satisfying r

In the first interpretation \mathcal{I}_0 (of τ), r must hold, the rest is arbitrary

Example (Büchi automaton for formula $\Box r$ over $AP = \{r, s\}$)

Büchi Automaton for LTL Formula By Example

Example (Büchi automaton for formula r over $AP = \{r, s\}$)

A Büchi automaton \mathcal{B} accepting exactly those traces τ satisfying r

In the first interpretation \mathcal{I}_0 (of τ), r must hold, the rest is arbitrary

Example (Büchi automaton for formula $\Box r$ over $AP = \{r, s\}$)

In *all* states \mathcal{I}_i (of τ), r must hold

Büchi Automaton for LTL Formula By Example

Example (Büchi automaton for formula r over $AP = \{r, s\}$)

A Büchi automaton \mathcal{B} accepting exactly those traces τ satisfying r

In the first interpretation \mathcal{I}_0 (of τ), r must hold, the rest is arbitrary

Example (Büchi automaton for formula $\Box r$ over $AP = \{r, s\}$)

$$\Sigma_r := \{l \mid l \in \Sigma, r \in l\}$$

In *all* states \mathcal{I}_i (of τ), r must hold

Büchi Automaton for LTL Formula By Example
