

# Negative aspects of Agile methods

SW Quality

## ● Documentation

Maintenance - hard to maintain agile projects

Individual independence - change of key persons

Better overview of the final result

## ● Time pressure

One does not feel the same time pressure when working with non-agile methodologies.

- **Transparency**

While working with agile methods, you get less transparency regarding the progress of the project

- **People need structure**

Too much freedom equals less productivity and more ideas outside the box.

Change is bad mmkaay?

- **Scalability**

Agile cannot be applied to large development teams. Waterfall for large projects.

- **Less failure**

You only fail once per project.
