Model-Based Testing (DIT848 / DAT260) Spring 2014

Lecture 11 Graph Theory Techniques in MBT

Gerardo Schneider Department of Computer Science and Engineering Chalmers | University of Gothenburg

Outline

- <u>Graph Theory Techniques in Model-Based Testing</u>, by, Harry Robinson
- Interactive exercises

Euler Graph

Is it an Euler Graph?

Answer: No, not possible to traverse all the edges without repetition (nodes A and B have an odd number of links)

Groups 2-5 persons: 5 min

Postman Problem

New York Street Sweeper

Groups 2-5 persons: 10 min

New York Street Sweeper

Groups 2-5 persons: 10 min

New York Street Sweeper

Solution: afbgea'ce'de" (we only use existing "streets")

Groups 2-5 persons: 10 min

Testing Combination of Actions

Solution: Transform the graph using de Brujin's algorithm (dual digraph) Groups 2-5 persons: 10 min

Testing Combination of Actions

Solution

Problems: e -"Forgot" transition f->b - Need to "Eulerize" the resulting graph

Groups 2-5 persons: 15 min

Testing Combination of Actions

e

Solution

(Complete)

10 Groups 2-5 persons: 15 min

h

Testing under a Time Deadline

• Read the paper:

Graph Theory Techniques in Model-Based Testing, by Harry Robinson (Presented at the 1999 International Conference on Testing Computer Software)

 If you are interested you can visit the <u>Chinese Postman Algorithm by Harold Thimbleby</u> homepage. It contains an implementation and a paper describing it

Guest lectures!

We will have guest lectures on **TDD**: **Micael Andersson** from **Volvo IT**

- Wed May 14, 13:15-17:00 TDD 1 (Introduction + interactive exercises)
- Mon May 19, 9:15-12:00 TDD 2 (Refactoring + Integration testing)
 - Bring your laptop and install all the required software
 - Please come to the assignment session on Monday May 5 to set your laptops!
